

ITU TELECOM WORLD 2014 Young Innovators Competition

ITU, the leading United Nations agency for information and communication technologies (ICTs), in partnership with the World Health Organization (WHO) is looking for innovative ideas on how ICTs can help smart cities to slow down or mitigate the effects of climate change and thereby improve people's health.

This might include novel technologies or combinations of existing technologies, services, and systems which would shape a smart city. It may focus on monitoring or reporting on climate change, mitigating or adapting the impact of climate change on society, or on changes in technology and society that lead to a greener community.

Are you an entrepreneur under the age of 30 and interested **in winning up to USD 5 000** in funding, plus mentorship, networking, and high-level exposure before an influential global audience of decision-makers?

Are you interested in working on concepts and ideas for new social start-ups which directly address climate change and its negative impact on health through a process of **co-creation**?

Do you want to be part of the select group of 10 young innovators from all over the world present **at ITU Telecom World 2014** in Doha, Qatar?

Apply now at: <https://ideas.itu.int>

Deadline: Tuesday, October 7 2014
