Michael Symonette  
CEO  
Utilities Regulation and Competition Authority  
Nassau, Bahamas

ATTN: Donavon Dorsett

Mr. Symonette,

In response to "Opening New Spectrum Bands", AMP'd Wireless Ltd. would like to make a formal request for frequencies to be opened for use in the broadband data industry.

As noted in section 3.2 in the URCA document, section (ii), the opening of new frequencies will allow companies such as AMP'd Wireless Ltd. to "increase competition in the sector" and ultimately give the customers a greater choice in who they choose to do business with.

Also noted in section 3.2, section (iii), the consumer demand for high speed data communications will continue to increase, and the natural progression is to use wireless communication to achieve this public service. The ability to connect a consumer without the need for trenching and extensive cabling will help deliver services more quickly and easily.

AMP'd Wireless is requesting the opening of the frequencies from 5.200 GHz – 5.350 GHz of the Standard Spectrum for use to provide wireless Local Loop and broadband data services. The structure would be consistent with providing Point to Multi-point services as well. The details of our plans has been provided to URCA through our recent application.

AMP'd Wireless Ltd. is eagerly awaiting the allocation of the requested spectrum so that we can deploy our equipment. Upon the Spectrum Licensing approval, we would look to be operating within 6 weeks and begin offering services within 3 months.

We request that a second option would be 5.000 GHz – 5.150 GHz, and third option be 5.400 GHz – 5.550 GHz. However, we are open to using any available frequencies between 4.9 GHz to 6.0 GHz and would be happy to work with URCA on establishing where the best ranges would be.

Sincerely,

D. Chris Brogdon  
AMP'd Wireless Ltd.  
Nassau, Bahamas
